FOUNDATION® Elite 3 Section Treatment Table

The Foundation range of variable height manipulation tables are ruggedly constructed. The frames are made from high quality square section (as opposed to weaker "C" section) steel tubing for maximum rigidity, and stability. The frames are finished in an attractive light grey powder coat enamel, which is simple to clean.

Each cushion is constructed of high quality MDF and is bolted to its individual steel frame for added rigidity and all round strength.

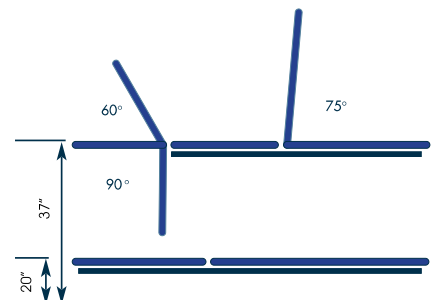

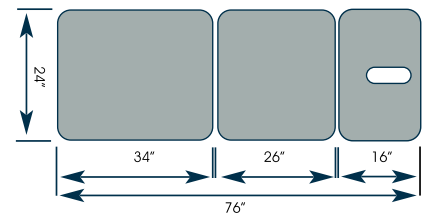

Highest quality upholstery is used with a special anti-stain, anti cracking finish, so a much longer upholstery life can be expected.

Extensive development went into designing a lifting mechanism which was not only very rigid, but also offered the practitioner the greatest range of operating heights on the market today. The exceptionally low minimum height of 19" allows easy access to the table for invalid patients.

the tallest practitioner to manipulate at the optimum height for comfort and posture.

Dimensions
Length 76"
Width 26"
Height 20" to 37"

SPECIFICATIONS:	
Minimum Height	20"
Maximum Height	37"
Cushion Width	26"
Head Section Length	16"
Leg Section Length	34"
Centre Section	26"
Head Section Angle	-75°/60°
Leg Section Angle	0/75°
Wheels	Standard
Total Length	76"
Lift Mechanism	Electric
Breathing hole	1
Moving Weight Limit	660 lbs.

FOUNDATION® Elite 7 Section PD Treatment Table

The Foundation range of variable height manipulation tables are ruggedly constructed. The frames are made from high quality square section (as opposed to weaker "C" section) steel tubing for maximum rigidity, and stability. The frames are finished in an attractive light grey powder coat enamel, which is simple to clean.

Each cushion is constructed of high quality MDF and is bolted to it's individual steel frame for added rigidity and all round strength.

Highest quality upholstery is used with a special anti-stain, anti cracking finish, so a much longer upholstery life can be expected.

Extensive development went into designing a lifting mechanism which was not only very rigid, but also offered the practitioner the greatest range of operating heights on the market today. The exceptionally low minimum height of 19" allows easy access to the table for invalid patients.

The 37" maximum height allows even the tallest practitioner to manipulate at

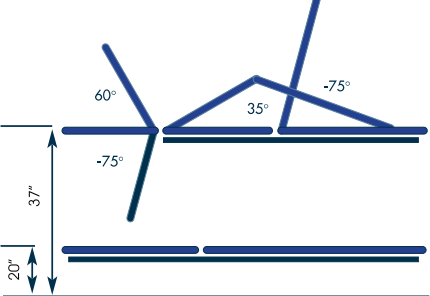

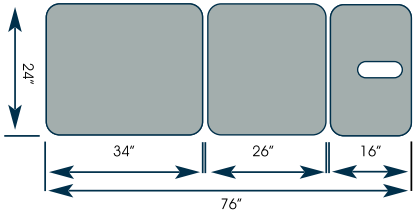

the optimum height for comfort and posture.

Face section lifts for seated massage or manipulation.

FOUNDATION® Elite Neurological Table

The standard Neurological Treatment Table has been specially designed for the treatment of patients suffering from neurological conditions. Featuring a large upholstered top which allows exercise movements to be performed with room both for the patient and the therapist.

This Table also offers an exceptionally low operating height of only 19". Excellent for patient transferring and standing exercises. The unique lifting mechanism allows a maximum height of 37" to be offered and a smooth lifting action is achieved by the electric actuator, which is controlled via a footswitch. Retractable wheels are supplied as standard allowing the table to be moved to any desired position.

SPECIFICATIONS:

Head Section Adjustment	-35° - +80°
Head Section Length	30"
Leg Section Adjustment	Horizontal only
Leg Section Length	48"
Lift Mechanism	Electric
Wheels	Standard
Cushion Width	48"
Breathe Holes	1
Minimum Height	20"
Maximum Height	40"
Over All Length	80"
Moving Weight Limit	660 lbs.

Chiro Verti Chiropractic Table

The ChiroVerti is a variable height table. An excellent range of operating heights can be achieved. This allows for the patient to be positioned simply and efficiently, and at the most convenient height for the Chiropractor.

This feature also makes the variable height tables suitable for clinics where multiple practitioners will be using the one table, allowing each Doctor to select his preferred operating height.

The ChiroVerti is supplied with 4 drops, Cervical, Lumbar, Dorsal, and Pelvic. The drops have been designed to provide a crisp feel, yet are virtually maintenance free.

Each drops tension can be adjusted for precise control, with an adjustment knob located on each side of the table. The Pelvic cushion comes complete with a Gonodal notch, for extra comfort.

Each cushion uses 2 densities of foam. A very high density foam is used as the basis of the cushion, adding firmness which assists in the drop technique.

However, a second softer layer of foam is added to provide comfort for the patient. The cushions are then upholstered in a supple yet long wearing vinyl.

The ChiroVerti will provide you with a stable platform to adjust on, with no lateral movement regardless of the patient weight.

Adjustable height and length ankle rest is provided to accommodate varying patient heights.

Hi Lo Weight Limit 660 lbs.
Static Weight Limit 880 lbs.

ChiroMax Chiropractic Table

The ChiroMax is a variable height table and Hi-Lo all in one. An excellent range of operating heights is achieved, allowing you to position the patient at the most comfortable operating height for various adjusting procedures.

The Hi-Lo function allows the patient to walk up to the table, and be lowered smoothly to a horizontal position, ready for treatment. At the end of the treatment the table will return them to a standing position. Many patients will be impressed with the ease and comfort of this procedure.

first requirement when designing the lifting action was to maintain stability, and avoid any flexibility associated with tables of this design. The ChiroMax will provide you with a stable platform to adjust on, with no lateral movement regardless of the patient weight.

Adjustable height and length ankle rest is provided to accommodate varying patient heights.

Hi Lo Weight Limit 660 lbs.
Static Weight Limit 880 lbs.
